
Which points the methods pick ($N = 20$, height = weight)
MC (20 points)
random
trapezoid (20 points)
Gauss-Legendre (20 points)
Golub-Welsch (20 points)
spaced in $\gamma$
log-trapezoid (20 points)
log-Gauss-Legendre (20 points)
log-Golub-Welsch (20 points)
spaced in $\log \gamma$
sigmoid fit (L2) (13 points)
sigmoid fit (L1) (146 points)
sigmoid fit (max) (13 points)
fitted
$10^{-3}$ $10^{-2}$ $10^{-1}$ $10^{0}$ $10^{1}$
$\gamma$ (log scale)
