
Which points the methods pick ($N = 20$, height = weight)
MC (20 points)
random
trapezoid (20 points)
Gauss-Legendre (20 points)
Gauss-PG (20 points)
spaced in γ
log-trapezoid (20 points)
log-Gauss-Legendre (20 points)
log-Gauss-PG (20 points)
spaced in $\log\gamma$
sigmoid fit (L2) (13 points)
sigmoid fit (L1) (146 points)
sigmoid fit (max) (13 points)
fitted
10^{-3} 10^{-2} 10^{-1} 10^{0} 10^{1}
γ (log scale)
